HANCOCK INDUSTRIAL LIMITED

ABOUT US

We are a leading specialist in the supply and distribution of rubber, spring and sylomer vibration isolators designed for diverse applications.

Applications: Manufacturing Machinery, HVAC Systems, Power Generation, Automotive Parts, Marine, Construction and agriculture Equipment..

Whether you are seeking solutions for reducing noise, vibration, enhancing equipment lifespan, or improving overall operations efficiency, HANCOCK INDUSTRIAL LTD stands as your trusted partner in vibration isolation technology.

<p>A. RUBBER Natural frequency between 10-15Hz. Effective in medium and high frequencies. Small static deflections. High dampening.</p>		
<p>B. SYLOMER® Natural frequency between 7-12Hz. Effective in medium and high frequencies. Very small static deflections.</p>		
<p>C. SPRING Natural frequency between 2-7Hz. Effective in low and medium frequencies. Large static deflections. Same static and dynamic behavior. Low dampening, excellent isolation.</p>		

Rubber, Springs and Sylomer all have different natural frequencies therefore they all have their place in different applications.

“TRIUMPH in collaboration: Client Praises Our success story!” for the project “Post Production Studio”

“The proactive service I received from Hancock Industrial was impressive and seemingly uncommon in most markets today. They imported the product in from Australia within a day and had it couriered to me as soon as they received it. Willing to help and a pleasure to deal with. The Sylomer product is easy to work with and in these early stages appears to be working well and the client is very happy with the outcome”.

Hancock will be attending the following in December and will be able to impart knowledge from this conference to our customers.
